### GRS PROFI SERIES FINISHING MOWERS

The four castor wheels can be set precisely and are easily adjusted without the use of tools. GRS Profi easily connected to the tractor's 3 point linkage to have the machine ready for operation in minutes and Floating linkage allows for even cut on undulating ground.

### OVERLAPPING ROTORS - No uncut strips of grass

3 overlapping rotors prevent unsightly uncut strips. Overlapping blades rotate within individual aerofoils to create a vacuum. This draws flattened grass to the cutting blade leaving a professional finish.
