THE SOLUTION FOR PARKS AND GARDENS

Maintenance work in parks and grassland are the core working area of the KMH-Profi shredders. Designed for use with garden or small tractors, they can be either hitched on the tractor's rear or front linkage or driven in reverse drive position. Available in two working widths 1.55m and 1,75m, these machines impress by their versatility.

DOUBLE 3-POINT LINKAGE MOUNTING

The KMH-F Profi can be easily attached to the tractor front or rear. As the KMH-FK Profi models, the KMH-F Profi seria range is also equipped with a 350mm hydraulic offset as standard. The shredder slides on two tubes of 40mm diameter, including Teflon bushes and greaser for more reliability.

DRIVE BELT TENSIONING

Drive belts can be tensioned simply and easily by means of a practical external screw system. All implements are fitted with toothed belts that, unlike plain belts, prove more effective and offer greater performance.
