### SWIVELLING BAL HITCH

Turnbuckle on the drawbar - levels the machine for an even cut.

### THE CENTRIFUGAL CLUTCH GIVES AUTOMATIC DRIVE ENGAGEMENT WITH THE AUTOMATIC TENSIONING

The centrifugal clutch gives automatic drive. The QR Series are fitted as standard with a centrifugal clutch, allowing for safe & efficient operation from the towing machine. The centrifugal clutch gives automatic drive engagement and disengagement, and combined with the automatic tensioning assembly reduces maintenance by compensating for belt wear and belt loading.

### ELECTRICAL START-UP WITH BATTERY

The engine is equipped with electrical start-up and pull cord. This means that you avoid having to use a recoil starter, and the arm strain this causes, to start the machine. The electrical start-up streamlines the start and stop, and makes the work smoother.
