THE XL SERIES IS A MULCHER WITH DOUBLE TRANSMISSION

The XL series is a mulcher with double transmission (10 belts) that allows the rotor to operate with improved power distribution, ensuring high performance and maximum mechanical resistance when processing larger diameters. Developed for professionals looking for a complete mulcher. The automatic tensioner guarantees optimal belt tension without the need for additional maintenance.

A HYDRAULICALLY OPERATED FORESTRY MULCHER

A hydraulically operated hood on a forest mulcher can be adjusted from an open position for cutting standing trees and brush to a closed position to control material ejection and improve mulching. This versatile function allows operators to process wood material more effectively by feeding it directly into the rotor when open, and it provides safety and better mulch quality when closed.

THE COUNTER BLADES FORST

The counter blades that help FORST forestry mulchers handle any kind of vegetation more efficiently. FORST Pro are interchangeable offset counter blades for finer shredding and smoother flow of wet material. The special design makes them efficient with very stiff wood and more flexible shrubs.

ROBUST Ø 512 MM SHREDDING DRUM

Robust Ø 512 mm shredding drum with electronic balancing and a tungsten carbide hammer system. With a single machine, you can reliably mulch trees up to 30 cm in diameter and perform soil work down to 10 cm depth.

Forest mulcher	 m	 min HP (kW)	 Cat	 RPM	 B mm / A mm	 mm		 Belt	 mm	 Kg
